4 Fundamental Pillars of OOP

- ▶ Encapsulation
- ▶ Polymorphism
- ▶ Inheritance
- ▶ Abstraction

Class and Objects

CAR

ENCAPSULATION

- ▶ **Public** – Can be directly called once the object is created
- ▶ **Private** – Called within a method and it is not visible when object is created

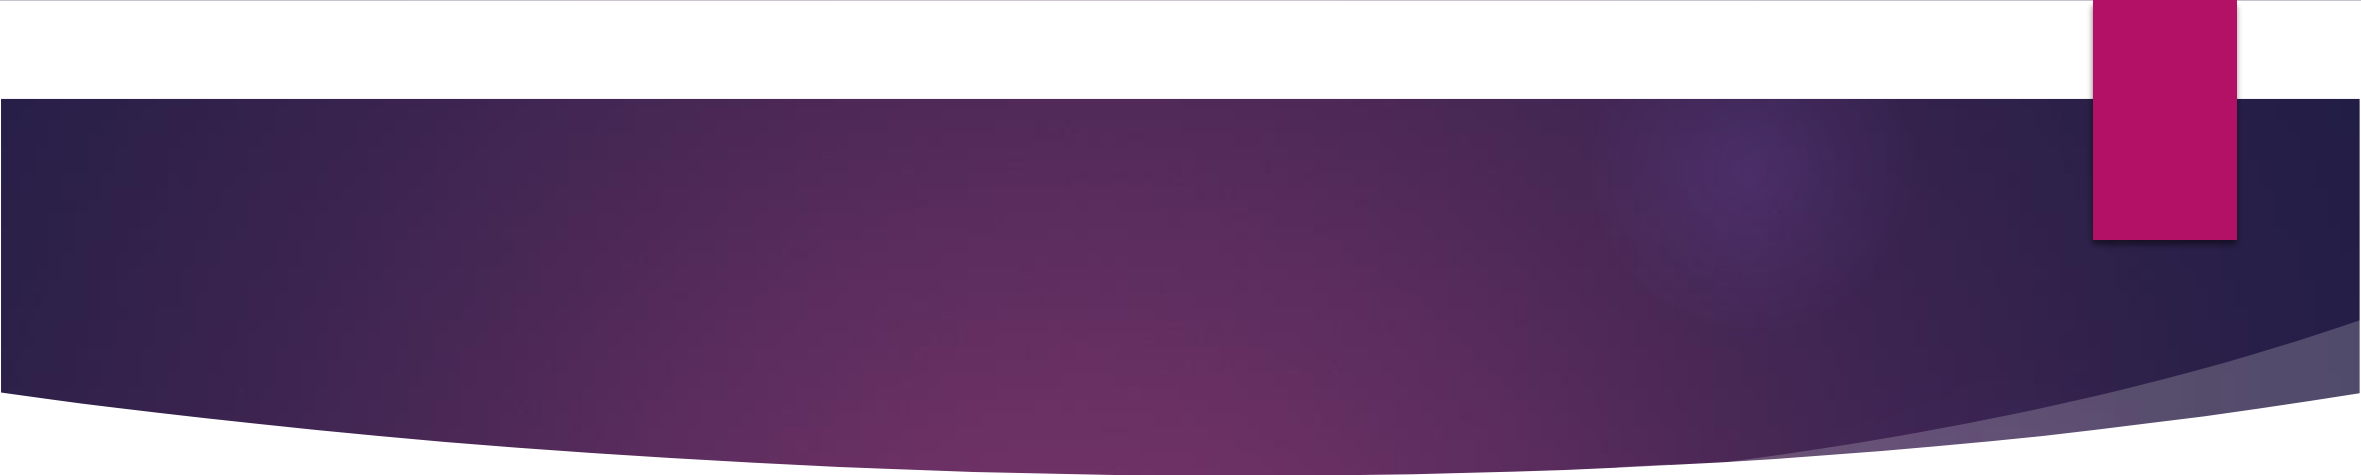

“To containerized and encapsulate as much”

INHERITANCE

POLYMORPHISM

- ▶ **Poly** = many
- ▶ **Morph** = change in forms
- ▶ **POLYMORPHISM** = is the ability of an object to take on many forms
